

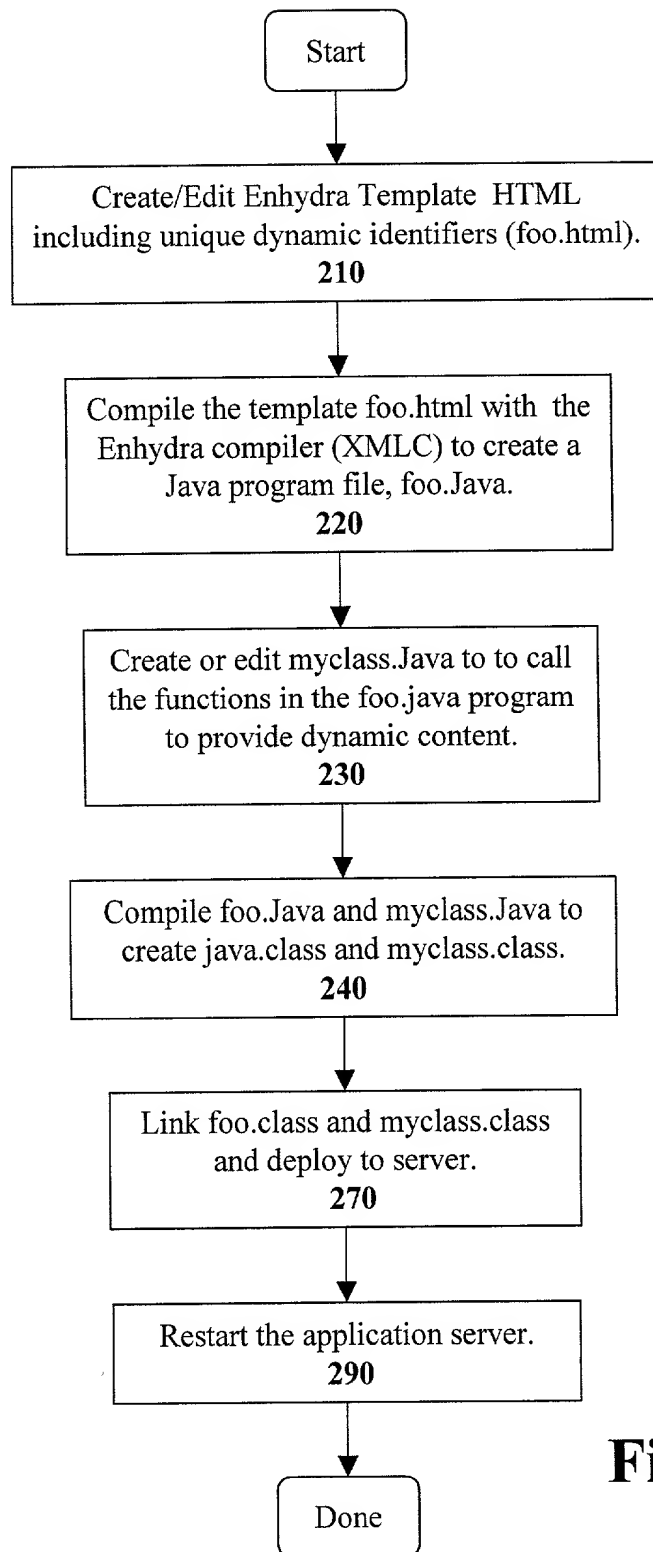

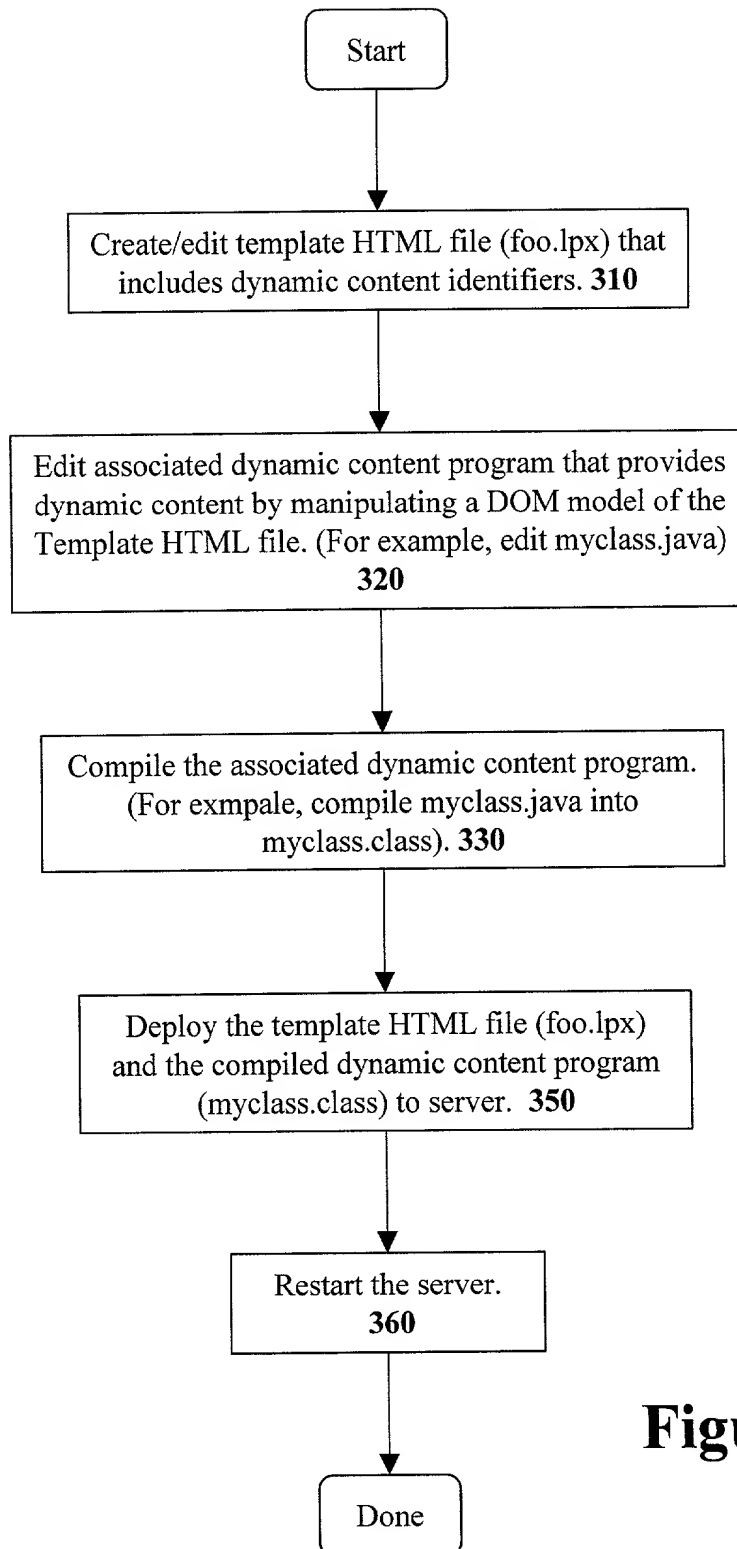

FIG. 1 is a block diagram of a network system. The system includes a central Internet 100, which is connected to various devices. On the left, there are two desktop computers, 110 and 115, both connected to the Internet 100. On the right, there is a desktop computer 113, also connected to the Internet 100. Below the Internet 100, there is a server rack 121, connected to the Internet 100. Above the Internet 100, there is another server rack 123, connected to the Internet 100. To the right of the Internet 100, there is a larger server rack 130, which is connected to the Internet 100. This server rack 130 is also connected to a database 131 via a connection 196. A dashed line 194 points from the server rack 130 to the database 131. The Internet 100 is represented by a large cloud shape with the label 'Internet 100' inside. The connections between the devices and the Internet are shown as solid lines with arrows indicating the direction of data flow.
